

Adjustable guiderails

A FlexLink standard solution

5077-1

For speedy product change-overs

The FlexLink conveyors can be equipped with an adjustable guiderail system. With this type of guiderail, change-overs between products with different widths can be performed very quickly.

The system, which consists of a number of guiderail support units along the conveyor, can be driven either pneumatically or manually with a hand wheel. Up to four parallel lanes can be handled by one system.

The unit in the picture is driven pneumatically and controls a single lane. In larger systems, several units may be connected to each other with shafts instead of driving each separate unit.

FlexLink is a leading supplier of automation solutions for manufacturing and assembly processes. The Paper Converting Centre of Excellence is a unit within FlexLink with specialists on product handling equipment for the tissue paper industry. We deliver systems for cost-efficient flow management at all stages of the converting operation, from the core to the finished product. Our extensive offer ranges from component deliveries to turn-key installations and pre-assembled modular units for the most common requirements.
